Exercise 6.6 - Task 2

Summary of metrics and annotated CAM overlays

Generated by script

Scope note: each dataset below is evaluated on a 200-image sample, not the full 3,600-image test-fog / test-night splits used in Exercise 3.6. With this few positive examples per class (as few as ~19-20 pedestrians per split), recall estimates here are noisy and should not be compared directly to the full-split numbers.
